

Critical Fix Roadmap — Remove Spam/Malware Page

This roadmap outlines one critical fix from your website audit: removing the compromised Meals & Nutrition forum page containing spam and malware links.

Problem Summary

The Meals & Nutrition forum page has been infiltrated by spam posts containing malware links. This poses a security risk to families and undermines trust in the school's online presence.

Step■By■Step Wix Instructions

- Log into the Wix Dashboard and open the Site Editor.
- In the left sidebar, click 'Menus & Pages'.
- Scroll to locate the 'Meals & Nutrition' forum page.
- Click the three dots (...) next to the page name.
- Select 'Delete'.
- Confirm deletion.
- Click 'Publish' in the top■right corner.
- Visit the live site and ensure the page no longer appears in the navigation menu.
- Optional: Remove the Wix Forum App entirely from the App Manager.

Verification Steps

- Visit the previous URL (e.g., /group/meals-nutrition/discussion). It should return a 404 error.
- Check the main site navigation to ensure the page no longer appears.
- Search Google: site:yoursite.com 'meals nutrition'. The old URL should disappear within 24–48 hours.

Optional Enhancements

- Create a new simple 'Meals & Nutrition' page with food philosophy and allergy information.
- Add a downloadable PDF with weekly or monthly menus.
- Add photos of meal preparation or dining areas for transparency.

This critical fix removes a major trust and security blocker from your website and prepares the foundation for additional improvements.
